

Friesen's Custom Pole Buildings

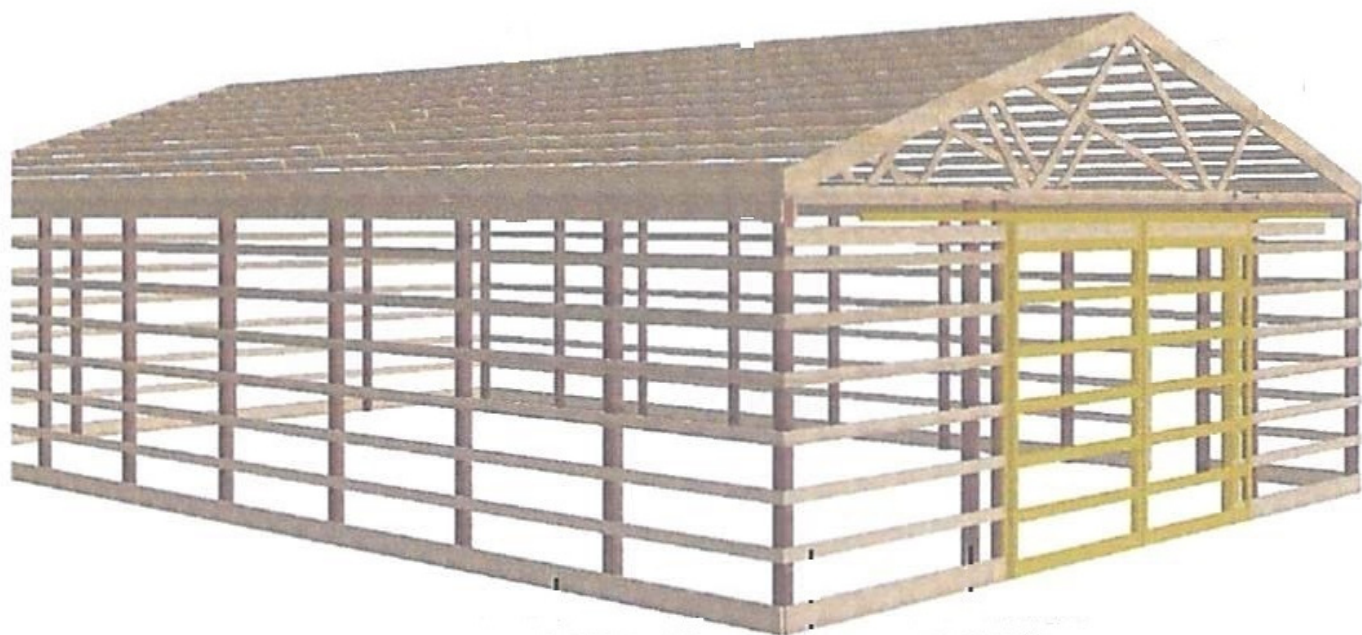

We at Friesen's Custom Cabins have had many requests over the years for large shop spaces. Up until now we always referred them to two other local companies since they were all set up to do large pole buildings and we didn't want to try and fill a need that was already being met in the community. Besides, they were our friends and we didn't want to be competitors.

The landscape has recently changed and those companies are no longer doing pole building; we are going to fill that need where we can. We have the equipment and expertise already so it is only natural for us to step forward.

Pole buildings are an excellent choice for large open spaces such as shops, barns, hangars, garages and commercial spaces. They are less expensive to build than conventional frame buildings and are very quick to erect. The framework is wood and the siding and roofing is structural metal panels.

Unlike building cabins, we do need a flattened site cleared and graded to accommodate the building. We can do that work as part of the project or we can refer a contractor to you for the site prep. We can build it with a gravel floor or a concrete floor, your choice. We have many sizes, wall heights and large door options to select from.

We have listed some of our most popular sizes below.

24 x 32: \$21,505

24 x 40: \$26,680

30 x 60: \$50,400

40 x 60: \$64,800

48 x 64: \$82,908

56 x 80: \$134,400

Includes pressure treated 6 x 6 poles, 2 x 6 purlins, 12' walls, free span engineered trusses, metal roof, metal siding, personnel door, and 12' x 10' sliding door.

Additional Options include:

Concrete floors

Overhead doors

Windows

Insulation packages

Lean-to structures

Extended eaves and overhangs

Wainscot

Carports

Sheds

Polycarbonate skylights
